

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

1. (previously presented) A method for selling a commodity using a shopping site on a network, said method comprising:

providing, by a commodity selling system, a first network address for a constituent member of a particular group and a second network address for a customer who is not a member of the particular group;

judging whether a customer who has accessed a commodity selling system via the network is a constituent member of a particular group based on a network address accessed by the customer;

selling an ordered commodity based on first sales conditions if the customer is a constituent member of the particular group, upon receiving the order for the commodity from the customer to the first network address; and

selling an ordered commodity based on second sales conditions if the customer is not a constituent member of the particular group, upon receiving the order for the commodity from the customer to the second network address.

2. (previously presented) The method according to claim 1, further comprising:
offering a first commodity catalog including the first sales conditions to the customer, if the customer is a constituent member of the particular group;

offering a second commodity catalog including the second sales conditions to the customer, if the customer is not a constituent member of the particular group; and

selling the ordered commodity based on the first sales conditions upon receiving an order issued using the first commodity catalog, and selling the ordered commodity based on the second sales conditions upon receiving an order issued using the second commodity catalog.

3. (original) The method according to claim 1, wherein a price of a commodity according to the first sales conditions is lower than the price of the commodity according to the second sales conditions.

4. (Cancelled)

5. (previously presented) A method for selling a commodity using a shopping site on a network, said method comprising:

judging whether a customer who has accessed a commodity selling system via the network is a constituent member of a particular group;

selling an ordered commodity based on first sales conditions if the customer is a constituent member of the particular group, upon receiving the order for the commodity from the customer;

selling an ordered commodity based on second sales conditions if the customer is not a constituent member of the particular group, upon receiving the order for the commodity from the customer; and

judging whether the customer is a constituent member of the particular group based upon a network route used by the customer to gain access.

6. (previously presented) A method for selling a commodity using a shopping site on a network, said method comprising:

providing, by a commodity selling system, a dedicated network address for a constituent member of a particular group and a general network address for a customer other than a constituent member,

certifying a constituent member of the particular group, and displaying a first commodity catalog including special sales conditions set for the constituent member of a particular group, and displaying a first commodity catalog including special sales conditions set for the constituent member of the particular group on a terminal of the constituent member, when the constituent member accesses the shopping site using the dedicated network address;

displaying a second commodity catalog including ordinary sales conditions on a terminal of a customer other than the constituent member, when the customer access the shopping site using the general network address; and

selling the ordered commodity based on the special sales conditions upon receiving the order issued using the first commodity catalog, and selling the ordered commodity based on the ordinary sales conditions upon receiving the order issued using the second commodity catalog.

7. (previously presented) A method for selling a commodity using a shopping site on

a network, said method comprising:

providing, by a commodity selling system, a first network address for a constituent member of a first group and a second network address for a constituent member of a second group;

judging to which group among a plurality of particular groups a customer who has accessed via the network belongs based on a network address accessed by the customer;

selling an ordered commodity based on first sales conditions if the customer is a constituent member of the first group, upon receiving the order for the commodity from the customer to the first network address; and

selling an ordered commodity based on second sales conditions if the customer is a constituent member of the second group, upon receiving the order for the commodity from the customer to the second network address.

8. (original) The method according to claim 7, further comprising:

offering a first commodity catalog including the first sales conditions to the customer, if the customer is a constituent member of the first group;

offering a second commodity catalog including the second sales conditions to the customer, if the customer is a constituent member of the second group; and

selling the ordered commodity based on the first sales conditions upon receiving an order issued using the first commodity catalog, and selling the ordered commodity based on the second sales conditions upon receiving an order issued using the second commodity catalog.

9. (previously presented) A system for selling a commodity, said system comprising:

a certification information storage unit storing information for certifying a constituent member of a particular group;

a certification unit checking whether a customer is a constituent member of the particular group with reference to said certification information storage unit, when accessed by the customer via a network based on a network address accessed by the customer;

a commodity information storage unit storing first sales conditions that define conditions for selling commodity to a constituent member of the particular group and storing second sales conditions that define conditions for selling a commodity to a customer other than a constituent member of the particular group; and

a selling unit selling a commodity based on a result of said certification unit and the sales conditions stored in said commodity information storage unit, upon receiving an order for the

commodity from the customer,

wherein a plurality of network addresses for access by a plurality of customers are provided.

10. (original) The system according to claim 9, further comprising an offering unit offering the first sales conditions to the customer who has been certified by said certification unit and offering the second sales conditions to other customers, wherein

said selling unit sells the commodity to the customer based on the sales conditions offered to the customer when receiving an order for the commodity from the customer.

11. (original) The system according to claim 9, wherein said commodity information storage unit stores the first and second conditions for each commodity.

12. (original) The system according to claim 9, wherein said certification information storage unit and said certification unit are owned or managed by a seller who sells the commodities.

13. (original) The system according to claim 9, wherein said certification information storage unit and said certification unit are owned or managed by the particular group.

14. (original) The system according to claim 10, wherein said offering unit displays a commodity catalog including the first sales conditions on the terminal screen of the customer who has been certified by said certification unit, and displays a commodity catalog including the second sales conditions on the terminal screen of a customer other than the certified customer.

15. (previously presented) An apparatus for selling a commodity, said apparatus comprising:

a providing unit providing a shopping site that can be accessed via a first network address for a constituent member of a particular group and via a second network address for a customer other than a member of the particular group;

a commodity information storage unit storing first sales conditions that define conditions for selling a commodity to a constituent member of the particular group and storing second sales conditions that define conditions for selling a commodity to a customer other than a constituent member of the particular group; and

a selling unit selling an ordered commodity based on the first sales conditions if the customer is a constituent member of the particular group upon receiving the order for the commodity from the customer to the first network address, and selling an ordered commodity based on the second sales conditions if the customer is not a constituent member of the particular group upon receiving an order for the commodity from the customer to the second network address, wherein whether the customer is a constituent member of the particular group is determined based on an address accessed by the customer.

16. (previously presented) An apparatus for selling a commodity, said apparatus comprising;

a providing unit providing a shopping site that can be accessed via a first network address for a constituent member of a particular group and via a second network address for a customer other than a constituent member; and

a selling unit selling an ordered commodity based on first sales conditions when accessed by a constituent member of the particular group using a first network address among the plurality of network addresses upon receiving an order for the commodity from the customer to the first network address and selling an ordered commodity based on second sales conditions when accessed by using a second network address upon receiving an order for the commodity from the customer to the second network address, wherein whether the customer is a constituent member of the particular group is determined based on an address accessed by the customer.

17. (previously presented) An apparatus for selling a commodity, said apparatus comprising:

a providing unit providing a shopping site that can be accessed via a first network address for a constituent member of a first particular group and via a second network address for a constituent member of a second particular group;

a commodity information storage unit storing first sales conditions that define conditions for selling a commodity to a constituent member of the first particular group and storing second sales conditions that define conditions for selling a commodity to a constituent member of the second particular group; and

a selling unit selling an ordered commodity based on the first sales conditions if the customer is a constituent member of the first particular group upon receiving an order for the commodity from the customer to the first network address and selling an ordered commodity based on the second sales conditions if the customer is a constituent member of the second

particular group upon receiving an order for the commodity from the customer to the second network address,

wherein whether the customer is a constituent member of the particular group is determined based on an address accessed by the customer.

18. (previously presented) The system according to claim 9, further comprising a terminal device used for purchasing a commodity from a shopping site on a network, the terminal device comprising:

an accessing unit accessing the shopping site, which offers a first commodity catalog to a constituent member of a particular group and a second commodity catalog to a customer other than a constituent member of the particular group, using a predetermined address;

a displaying unit displaying the first commodity catalog offered by the shopping site; and
an ordering unit ordering a commodity using the first commodity catalog.

19. (previously presented) A recording medium that records a program, executed by a computer, for selling a commodity, said program causing the computer to perform:

providing, by a commodity selling system, a first network address for a constituent member of a particular group and a second network address for a customer who is not a member of the particular group;

judging whether a customer who has accessed via the network is a constituent member of a particular group based on a network address accessed by the customer;

selling an ordered commodity based on first sales conditions if the customer is a constituent member of the particular group, upon receiving an order for the commodity from the customer to the first network address; and

selling an ordered commodity based on second sales conditions if the customer is not a constituent member of the particular group, upon receiving an order for the commodity from the customer to the second network address.

20. (previously presented) A recording medium that records a program, executed by a computer, for selling a commodity, said program causing the computer to perform:

providing a shopping site that can be accessed via a first network address for a constituent member of a particular group and via a second network address for a customer other than a member of the particular group; and

selling an ordered commodity based on first sales conditions when accessed by a

constituent member of a particular group using the first network address, and selling an ordered commodity based on second sales conditions when accessed by using a second network address by a customer other than a member of the particular group wherein whether the customer is a constituent member of the particular group is determined based on a network address accessed by the customer.

21. (previously presented) A recording medium that records a program, executed by a computer, for selling a commodity, said program causing the computer to perform:

providing a shopping site that can be accessed via a first network address for a constituent member of a first particular group and via a second network address for a constituent member of a second particular group; and

selling an ordered commodity based on first sales conditions if the customer is a constituent member of the first particular group upon receiving an order for the commodity from the customer to the first network address, and selling an ordered commodity based on second sales conditions if the customer is a constituent member of the second particular group upon receiving an order for the commodity from the customer to the second network address,

wherein whether the customer is a constituent member of the first or second particular group is determined based on a network address accessed by the customer.

22. (previously presented) The apparatus according to claim 15, further comprising a terminal device used for purchasing a commodity from a shopping site on a network, the terminal device comprising:

an accessing unit accessing the shopping site, which shopping site offers a first commodity catalog to a constituent member of a particular group using the first network address and a second commodity catalog to a customer other than a constituent member of the particular group using a second network address;

a displaying unit displaying the first commodity catalog offered by the shopping site; and an ordering unit ordering a commodity using the first commodity catalog.
